

Manufacturing

Fox's advanced manufacturing capabilities incorporate state of the art process equipment and advanced computer control technology. Our specialized FAST FOX and JITO mini-manufacturing operations combine flexible manufacturing techniques with unique design and production technologies to achieve ultra-fast turnaround of specialized production lots for specific customer requirements.

Each step in our manufacturing and assembly processes is performed under atmospherically controlled conditions, including our Class 100 Clean Room. Each piece of equipment – from our crystal etching machines through the ovens, plating systems, pick and place machines and welding equipment – represents the latest in manufacturing capability, efficiency and quality. This equipment, combined with highly skilled workers and innovative process control techniques, enables Fox to cost-effectively produce the finest frequency control products in the world.

Fox Quality Philosophy

Customer satisfaction begins with superior product quality and excellent service. In order to satisfy our customers, our quality philosophy is built on the foundation of continuous improvement in all facets of our business. Our quality assurance program is based on quality and engineering planning, employee training, supplier relationships, and statistical process controls. We strive towards zero defects by prevention methods instead of detection methods.
