

# The Fox Family of Products

Fox produces four basic classes of products: quartz crystals in more than 20 types including micro and ultra miniature, thru-hole or surface mount, with stabilities as low as 10 PPM, and frequencies to over 200 MHz; clock oscillators, including enable/disable oscillators, programmable oscillators, voltage-controlled oscillators and complementary output types in frequencies to 250 MHz; temperature controlled and voltage controlled crystal oscillators (TCXOs and VCXOs) in both thru-hole and surface mount models; and monolithic crystal filters.

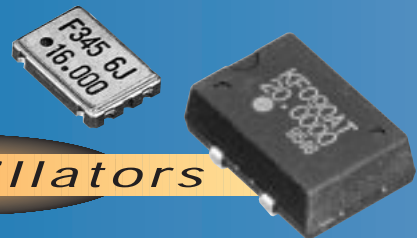

Many of our more popular models such as standard resistance-welded crystals and TTL Clock Oscillators, are available thru FASTFOX, our system for getting "Rush" orders in a matter of days, not weeks. And to further help the designer speed new products to market and to meet the demand for more flexible, build-to-order (BTO) manufacturing, Fox launched in 1997 the remarkably successful JITO™ Just-In-Time-Oscillator™ program. With JITO parts, industry standard lead times for custom or standard frequency oscillators from 340 kHz to 250 MHz have been cut from 10 weeks or more to 10 days or less.
